Detailed Action

Response to Amendment

1. Applicant's amendment and accompanying Remarks filed 12-10-05 have been entered and carefully considered.

The amendment is sufficient to overcome the obviousness rejections of claims 29-39. Claims 40-45 were added for consideration.

Double Patenting

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-39 and 40-45 are provisionally rejected under the judicially created doctrine of double patenting over claims 1-62 of copending Application No. 10/767838. This is a provisional double patenting rejection since the conflicting claims have not yet been patented.

The subject matter claimed in the instant application is fully disclosed in the referenced copending application and would be covered by any patent granted on that

copending application since the referenced copending application and the instant application are claiming common subject matter, as follows: A shale retorting apparatus and a process for retorting shale as well as processing oil vapors emitted therefrom.

Furthermore, there is no apparent reason why applicant would be prevented from presenting claims corresponding to those of the instant application in the other copending application. See *In re Schneller*, 397 F.2d 350, 158 USPQ 210 (CCPA 1968). See also MPEP § 804.

Prior Art of Record

3. The prior art of record and not relied upon is considered pertinent to Applicant's disclosure. In addition, the following references are cited for disclosing various aspects of Applicant's invention:

UA 3,519,539; US 2,814,587.

Allowable Subject Matter

4. Claims 1-45 would be allowable if rewritten or amended to overcome the rejection(s) as provided by the outstanding double patenting rejection of the instant application, set forth in this Office action.

The following is a statement of reasons for the indication of allowable subject matter: with respect to claim 1, the closest prior art, US 4,165,216 to White et al teach the claimed apparatus except for the collection plate having lower end disposed at or adjacent to the partition wall and an opposing upper end disposed at or toward the perimeter wall. Claims 2-15 depend on claim 1 and would also be allowable.

With respect to claim 16, the closest prior art, US 4,165,216 to White et al teach

Art Unit: 1764

the claimed apparatus except for a first partition wall and a spaced apart second partition wall disposed within the central compartment so as to separate the central compartment into at least a first heating chamber, a second heating chamber, and a vapor chamber, the vapor chamber being disposed between the first and second heating chambers. Claims 17-28 depend on claim 16 and would also be allowable.

With respect to independent claim 29 and 42, no prior art has been found that teaches the claimed methods where discrete streams of emitted oil vapor are collected along an elevational section or vertically spaced apart locations of the heating chamber. Claims 30-41 depend on claim 29. Claims 43-45 depend on claim 42.
